

## RAIN BARRELS

Rain barrels are an excellent way to reduce your water consumption and save your money. By collecting water from rainfall and utilizing the water captured at timely intervals, you can maintain healthy lawns and plants during dry spells in the summer. You will also reduce water pollution by allowing the water to flow through its natural path, not travel over pavement where it may pick up toxins. There have been several advancements in the rain barrel industry over the recent years. Stratford residents are strongly urged to purchase rain barrels, to aid in reducing water consumption and taxing our city's water flow system. Make sure rain barrels are covered with a screen to keep debris (ie. leaves) and prevent mosquitoes.
